

TO Modeler's Miniatures & Magic

Star Destroyer Production Message

I am honored that you posted it on the Web for several years.

This will be the last work!

A few years later, if we still have enough resources we would like to build 2001 a Space Odyssey's spaceship.

A few years later, if I have sufficient funds, I would like to build a spacecraft of 2001a Space Odyssey.

I write a little about Star Destroyer's production.

The foundation used Randy Cooper Models 42 "Avenger Star Destroyer

1. Before making this 42 "Avenger Star Destroyer, work started from special tool making.
2. The most difficult work was resin distortion and air bubbles.
3. The support base began to be built with the same structure as the original.
4. The thickness of the parts of the hull was not constant, so we made a lot of new parts.
5. Compared with the original angle and length of the hull, there was a problem that the hull was 1 degree right and left and the hull length was short.
6. The delta part of the rear part of the hull is newly manufactured.
7. We use about 3000 parts including our original parts.
8. All the parts attached to the surface of the rear part of the bridge are scaled down.
9. The changed parts of the hull became hundreds of places.
10. I made a reduced halogen lamp with reference to the original halogen lamp.

That is a major change.

Please enlarge and see the picture.

I sincerely thank you.
